

EMR Statement:

We strongly encourage everyone to get the COVID-19 vaccine. The more people who receive the vaccine now, the faster we protect everyone from this virus.

Getting the vaccine as soon as possible protects you and others around you from getting very ill or being hospitalized from COVID-19, even if you've already been exposed or are considered low risk.

COVID-19 vaccination will help protect you by creating an immune system response without experiencing sickness from COVID-19, which could have serious, life-threatening complications.

The COVID-19 vaccines available to Oklahomans are safe, effective and are undergoing some of the most intensive safety monitoring in U.S. history.

You can find a vaccine near you at _____.
